## 1 Requirements

For the Transport objects to work there are a few requirements that need to be fulfilled. There has to be a correctly installed version of Adobe Reader 8.0 with the addition of the Adobe LiveCycle Designer. The LiveCycle Designer is required to create and output an Interactive Adobe Form.

In order to create a faultless connection between the SAP System and the Reiner jetStamp Printer, you have to install the Reiner Printer Drivers and set the Printer to the default Printer under your Windows printer settings.

The Drivers for the printer are provided within the delivery of the Reiner jetStamp Graphic marking device.

## 2 Transactions

In the further course of this Document there are three different form technologies mentioned. SAP Script, Smartforms and Adobe Interactive Forms. Each has its own used components listed with a detailed description of use.

To use the corresponding form technology application, use the transaction Z\_JETSTAMP\_A/B/C.

The letter at the end of the Transaction describes a different version of the application.

### 2.1 SAP Script

Within the transport there are three different SAP Script forms with their corresponding ABAP report and print program. Forms can be viewed and edited under the Transaction SE71 in the SAP System.

Printprogram / Transaction	Form	Description
Z_JETSTAMP_A	ZJETSTAMP_A	Record and print of a name entry.
Z_JETSTAMP_B	ZJETSTAMP_B	Record and print of a name entry with the addition of a Barcode which contains the encrypted name.
Z_JETSTAMP_C	ZJETSTAMP_C	Best practice case. Through the input of a production order number an encrypted barcode containing the Material number gets generated, with the additional output of material specific data such as Material description, Material number, quantity and the base unit.

## ADVANCED APPLICATIONS

---

### 2.2 Smartforms

Within the transport there are three different „Smartforms“ forms with their corresponding ABAP report and print program. Forms can be viewed and edited under the Transaction „smartforms“ in the SAP System.

Printprogram / Transaction	Form	Description
Z_JETSTAMP_A	ZJETSTAMP_A	Record and print of aa name entry.
Z_JETSTAMP_B	ZJETSTAMP_B	Record and print of a name entry with the addition of a Barcode which contains the encrypted name.
Z_JETSTAMP_C	ZJETSTAMP_C	Best practice case. Through the input of a production order number an encrypted barcode containing the Material number gets generated, with the additional output of material specific data such as Material description, Material number, quantity and the base unit.

### 2.3 Adobe Interactive Forms

Within the transport there are three different „Interactive Form“ forms with their corresponding ABAP report and print program. Forms can be viewed and edited under the Transaction „SFP“ in the SAP System.

Printprogram / Transaction	Form	Description
Z_JETSTAMP_A	ZJETSTAMP_A	Record and print of a name entry.
Z_JETSTAMP_B	ZJETSTAMP_B	Record and print of a name entry with the addition of a barcode which contains the encrypted name.
Z_JETSTAMP_C	ZJETSTAMP_C	Best practice case. Through the input of a production order number an encrypted QR-Code containing the Material number gets generated, with the additional output of material specific data such as Material description, Material number, quantity and the base unit.

### 3 Spool Output-Devices

Within the transport there are two different spool output-devices integrated. The output devices can be viewed under the Transaction SPAD in the SAP System. View Quick-Guide for output device configuration.

Output-Device / Shortname	Description
JetStamp PDF / JET2	Output device used for printing PDF forms.
JetStamp (SF / SS) / JET1	Output device used for printing Smartforms / SAP Script forms.
